

The top half of the image features four SKF Food Line Y-bearing units arranged on a wet, reflective surface. The units are surrounded by fresh produce, including tomatoes, oranges, lemons, and apples, all covered in water droplets. The background is a clean, white surface with a subtle pattern of water droplets. The SKF logo is positioned in the top right corner.

Kill bacteria, not bearings

with maintenance-free, corrosion-resistant
SKF Food Line Y-bearing units

Engineered to withstand frequent high pressure washdowns

- Effective 2RF seal prevents water ingress, eliminating need for relubrication to “purge” bearing of water and contaminants
- Corrosion resistant housings with stainless steel and zinc-coated bearing inserts
- No relubrication, less environmental impact and risk of lubrication points being missed
- Non-porous surface with no cavities reduces risk of bacteria accumulation
